SKILLS

Languages & Core

C# (expert, since 1999)

.NET 10 / .NET C# 14

OOP · OOD · SOLID DRY

Async & multithreading

GC optimization

Design patterns (Observer, Singleton, event-driven, CRTP)

Immutable / record-based design

Mobile

.NET MAUI MAUI Blazor Hybrid

Android & iOS Native lifecycle intero

In-App Purchases (Billing v8, StoreKit)

Push notifications (FCM)

Web

Blazor HTML CSS

Component & design-system architecture

Desktop

Windows .NET apps

Win32 / DPAPI / CNG

Developer tooling

Game Development

Unity C# gameplay systems

Object pooling

Custom input system

Drop-in save system

3D flight mechanics

Level & scene design Steam release

Cloud & Backend

Firebase (Auth, Firestore, Storage, FCM)

Offline-first sync Polly resilience

Security & Cryptography

Windows DPAPI CNG

AES SHA-based KDFs

Secure memory management

Tooling & Practice

Git Visual Studio

MSBuild multi-targeting

Source generators

System.Text.Json custom converters

Unit & integration testing

Technical documentation

Build & release engineering

SYSTEMS I'VE DESIGNED

Object pooling system

Custom input system

Centralized, configurable settings system

3D flight system

Drop-in save system

NPC random movement system

Observer event system

CORE STRENGTHS

System architecture

Advanced C#/.NET

Concurrency & performance

Cross-platform mobile

Monetization / IAP

Cloud & resilience

UI & design systems

Testing & diagnostics

Root-cause debugging

KEY POINTS

I can start right away, I need job urgently.

I am okay to relocate to any city or country.

I learn quickly and adopt almost every situation.

I remain "solution oriented" in challenging situations.

I stay focused and productive under pressure.

I can adapt to flexible working hours.

I have experience about publishing in Steam.

EDUCATION & LANGUAGES

B.Sc. - Computer Technology & Information Systems

Faculty of Science · Bartın University, Türkiye

2019 – 2024 GPA 3.2 / 4.0

English Fluent

Turkish Native

33+ repositories on GitHub and 2 more playable games on itch.io.

1 PROFILE

Türkçe

C# expert and software engineer building production software since 2019, end to end across mobile, web, desktop and games. I architect systems - not just write features - and ship them to real users: I solo-architected and released a commercial cross-platform .NET MAUI Blazor Hybrid app to both the App Store and Google Play, and was lead developer on a commercial Unity game published on Steam. Strong across the whole C#/.NET stack (MAUI, Blazor, Windows desktop) and Unity, with a real track record in architecture, performance, concurrency, monetization, security/cryptography, and clean, thoroughly documented code.

2 EXPERIENCE

April 2026 – June 2026
23 Apr 2026 - 23 Jun 2026

FEATURED · SHIPPED TO BOTH STORES

CulturEnglish - Cross-Platform Mobile App

Software Architect & Developer · .NET 10 · MAUI Blazor Hybrid

A commercial language-learning app I solo-architected and shipped to both stores (v4.0.0) - ~19.6K lines across 217 source files, re-engineered from an existing Flutter app onto an architecture of my own design.

Download on the App Store

GET IT ON Google Play

- Solo-architected and shipped a **commercial cross-platform app** to the App Store and Google Play; designed the structure of all 217 source files and every screen myself.
- Designed a **custom inheritance-based Blazor page architecture** (after rejecting MVVM as a poor fit for MAUI Blazor Hybrid) and solved the non-obvious dual-instance lifecycle bugs the framework does not guard against.
- Built **idempotent, crash-recoverable In-App Purchases** over Google Play Billing v8 and Apple StoreKit - and caught and fixed a real money-losing concurrency race in the wallet with a single serialization lock.
- Engineered a **unified cross-platform native event hub** over the Android and iOS lifecycles; verified the full iOS build on Windows by reading MAUI's package metadata via reflection.
- Built an **offline-first cloud library on Firebase** (Auth, Firestore, Cloud Storage, FCM) with two-tier caching, version-gated delta sync, and Polly-based resilient I/O with enforced timeouts.
- Built a **fully C#-driven design-token system**, a custom on-device test harness with branch-specific root-cause diagnostics, and maintained design specs, a pre-release audit, and a 33-entry engineering journal.

SECURITY ARCHITECTURE · AI-ASSISTED SCALE

Jun 2026

VirusTotal Scanner - Security Utility

Senior Software Architect & Developer · C# · WinForms

A massive, 20,000+ LOC desktop security utility comprised of over 60 core C# services. I solo-architected the system and authored 120+ technical RFCs, utilizing AI strictly as an implementation engine to exponentially scale output while maintaining absolute architectural control.

Source Code

- Architected a massive **20,000+ line codebase** utilizing an extremely disciplined, document-driven development lifecycle.
- Authored over **120 comprehensive architectural design documents (RFCs)**, defining rigid concurrency and memory constraints before leveraging AI as an implementation accelerator.
- Implemented aggressive **memory optimization using ArrayPool** for 1 MB hashing buffers, eradicating GC latency spikes during recursive folder sweeps.
- Built deep OS-level integrations using **WMI (Win32_ProcessStartTrace)** to intercept and scan unknown processes the exact moment they execute.
- Engineered a zero-quota API fallback using a **headless Chromium WebView2** instance, successfully hooking into WebResourceResponseReceived to bypass invisible reCAPCHAs.
- Designed resilient local storage via AtomicFile JSON saves and a strictly filtered BindingList event storm handler to **maintain 60fps UI** even with massive row counts.

The Simple Balance - Commercial Game

September 2024 – July 2025

Lead Developer · Unity · C# · Steam (Windows)

A scene I designed

- Hired by the project owner ([Kai Niklas](#)) as lead developer to take a ~65%-complete game to a published Steam release.
- Built the remaining 5 levels, a random encounter system and other gameplay systems, designed and added new quests and stories, fixed bugs, and published the title on Steam in July 2025.

3 PERSONAL PROJECTS

Youtube Playlist Synchronizer

Jun 2026

C# · WinForms

OAuth Desktop Sync

A robust desktop application that keeps local folders locked in sync with YouTube playlists (including private/unlisted), featuring a Google OAuth PKCE loopback flow. Engineered a headless background daemon mode specifically designed for startup execution without UI overhead, utilizing system tray integrations.

Source Code

Codec2Player

Jun 2026

Java · Android

Android Performance Low-level

Developed an ultra-minimalist Android audio player prioritizing the absolute smallest installed footprint on the device (~20 KB installed). Discovered and utilized a mechanism to bypass Android's ART 'dex2oat' compilation, ensuring the installed size on the device remains strictly identical to the raw APK size.

Source Code

The Don't Fall

Jun 2023 – Sep 2023

C# · Unity Game

2D Platformer

Developed a robust 2D platformer emphasizing **precision-based movement mechanics** and **challenging level design**. Engineered a custom physics controller for responsive jumping and collision detection. Designed intricate platforming sequences, implementing state-driven animations, moving platforms, and scalable scene management for an optimized gameplay experience.

C# · Unity Game

RPG Adventure Action

A first-person 3D RPG prototype (comparable to Skyrim in scope) that I solo-architected and developed. Engineered **highly optimized data structures**, a robust interaction architecture, and integrated AI services for dynamic dialogue, demonstrating advanced problem-solving skills and engine-level optimizations beyond Unity's default solutions.

TPMPass

Feb 2026

C# · Password Manager

Cryptography Memory Protection

DPAPI · TPM

A highly secure, passwordless password manager for Windows that leverages the **Windows Data Protection API (DPAPI)**. Solo-architected and developed, the application replaces traditional master passwords by tying encryption directly to the user's Windows identity and underlying TPM hardware. The project emphasizes advanced data protection, secure memory management, and system-level integrations.

Source Code

Space Traveler

Aug 2022 – Sep 2023

C# · Unity Game

RPG Action Adventure

A 3D space adventure game with high-performance flight mechanics, engineered to handle fast-paced obstacle generation and continuous movement. Solo-architected the entire codebase with a focus on **zero-allocation memory management**, decoupled input handling, and extensive custom editor tooling to streamline development.

Alpha Channel Changer

May 2024

C# · Dev Tool

Tooling Textures

I created this development tool for merging alpha channels on textures in my game projects. I love creating useful small tools for development. I also have bunch of small tools that I didn't upload to github yet.
